

## Notice: New Books Added to the Library

We are pleased to inform all students and faculty members that a new collection of books has been added to the library. These books cover various subjects including computer science, artificial intelligence, programming, and competitive exam preparation.

Students are encouraged to explore these new resources to enhance their knowledge and academic performance. All books are available for issue as per standard library rules.

Below is a sample list of newly added books:

| Title                          | Author               | Subject           | Rack No. |
|--------------------------------|----------------------|-------------------|----------|
| Data Structures Made Easy      | Narasimha Karumanchi | Data Structures   | R1       |
| Artificial Intelligence Basics | Tom Taulli           | AI                | R2       |
| Java Programming Masterclass   | Herbert Schildt      | Programming       | R3       |
| Quantitative Aptitude          | R.S. Aggarwal        | Competitive Exams | R4       |
| Operating System Concepts      | Silberschatz         | OS                | R5       |

Visit the library to check out these books and make the most of the available resources.
